Dear Sir or Madame

Sergey Shulubin - Software Engineer - *Curriculum Vita*

In 1994 after five years full-time study, I graduated from St Petersburg University with a Masters in High Algebra and Numbers Theory (1st Attachment).

In 1999 whilst working in St Petersburg, Russia, I successfully applied for work as a programmer in Australia. I worked for SMARTs in George St, Sydney. SMARTs also arranged my Australian working visa. That opportunity provided me a gateway to a few contacts in the USA, UK and Europe.

Since 2003 I have worked freelance with various clients as well as running projects on a permanent basis including ongoing support of websites and running incoming projects for a web-development company.

My CV (2nd Attachment) which evidences that most of my work opportunities in recent years have been sourced from the USA.

I am cognisant that there are a plethora of Software Engineers seeking to deliver the coding expertise that I provide. Hence, on occasions I have had to work long hours to meet deadlines, in order to safeguard my reputation with my project managers / future work providers.

I am married with a nine year old son, Timothy. My wife, Anya, works at the St Petersburg *Winter Palace* State Hermitage Museum – the most esteemed museum in Russia and a major tourist attraction.

I welcome discussing my enclosed CV on WhatsApp, Skype, Viber *'et al'*.

If my CV does not fit Atlassian's code writing needs, I welcome you sending my CV onto anyone else that might have a need for my expertise. Alternatively, I would appreciate the contact details of any other company/ies, either within Australia or overseas, that might be interested in providing me an opportunity.

Yours faithfully

Sergey Shulubin
